Reduce data entrytime

Customisable interfaces

Automate workflows | Extensive and dynamic suite of standard and adhoc reports

Compliance with national benchmarking standards

Tailored meaningful reports | Simple and intuitive Appointment Management

Fully customisable clinic/diary set up

Centralised referral and wait list management systems | Fully integrateable with client IT Patient Administration and Information Systems

Standard OBDC / HL7 feeds to the SQL Server 2005/2008 database

Expereince and expertise working with Client and IT and Third Party Infomration Systems | For the past 12 years, customers have relied on Softlogic to not only deliver the best products, but also for the company's significant experience and value-added implementation services including data conversion, project Management, account management and training. |

DESIGN & DEVELOPMENT

» **Alliedone** is easily scalable, with scope to adapt from individual service use through to integrated implementation across large scale healthcare networks.

» **Alliedone** is currently being used by Allied Health Professionals across Australia throughout the continuum of care to enable health activities to be conceptualised, analysed and reported in a way that is meaningful at local, organisation and external stakeholder level.

The Comprehensive Solution for Health Management & Performance Reporting

The current healthcare landscape demands agile and efficient healthcare service delivery, placing pressures on health care service providers, to reduce costs, increase access and affordability of services and provide greater accountability. ALLIEDONE IS YOUR SOLUTION for implementing a strategic approach to workforce data management that is easy to use, consistent, evidenced, relevant and meaningful.

The Alliedone package as your chosen approach for workload measurement and management will provide the critical function of establishing a standardised and consistent approach for capturing, analysing and reporting patient and staff level activity.

The application of, Alliedone within your Health Service will enable you to provide:

- A common language to communicate core aspects of your business activity meaningful at local, executive and external stake holder level
- A standardised system for allied health management and staff to compare their clinical practices.
- A rich database for research and quality projects into allied health activities, interventions and outcomes
- Capacity for participation in standardised benchmarking across Australia.
- An additional source of valid and reliable data to exhibit your departments strategic focus.

STRATEGIC BENEFITS & FEATURES

With expert logic built into the system in conjunction with seamless integration with client IT systems, Alliedone's streamlined, simple and intuitive function and design facilitates quality data capturing.

The software is designed to bring together your patient and staff clinical and non-clinical activity to provide health managers with easily accessible information to accelerate decision making, streamline workflows and improve staff efficiency.

As an Integrated, flexible information system, **Alliedone** provides convenient access to capture and analyse patient flows, staff activity and scheduling from admitted acute patients through to ambulatory and community health.

DATA MANAGEMENT - Alliedone provides a complete clinical picture .

- Streamlined and efficient data entry to reduce time taken by staff to capture reportable activity
- Simple and intuitive function and design suitable for all levels of IT confidence
- Customisable workflows incorporating Diagnosis; Indicators; Interventions & Outcomes
- Administrative controls to streamline and automate workflows through flexible interfaces
- Live display of total and specific IPA/NIPA and non-clinical recorded activity
- Health professional printable workloads
- Customisable alerts, data entry and correction timelines

REPORTING - Extensive suite of reports congruent with national benchmarking standards

- Clinical care activity – time per OOS /HCP/Intervention/Ward/Unit
- Referral pathways and management – totals workload per discipline/unit/HCP/overall
- Non-clinical care activity – time spent in teaching training, clinical service management and Research
- Custom built
- VINAH /TR2 (customisable Data file to meet reporting requirements)
- Resource utilisation – Equipment/consumables

SCHEDULING- Flexible, quick and convient patient appointment and waitlist mangement

- Customisable clinic/diary set up with capacity to account for planned and unplanned leave and cover
- Centralised referral and wait list management module
- Automated outpatient work list aligned to individual clinics and/or health professional for efficient and accurate activity recording

INTEGRATION -Seamless integration with client IT Systems

- Capacity and experience in integration with various patient administration systems and third party IT systems to capture PMI, Admission & separation data.
- Client IT & Softlogic integration using standard OBDC / HL7 feeds to the SQL Server 2005/2008 database to reduce manual data entry and/or re-entry and potential data quality and integrity problems
- Real time patient demographic data transfers

SUPPORT TRAINING AND TROUBLESHOOTING

- **Softlogic Australia** has been providing comprehensive and highly integrated software solutions for the Healthcare sector for the past 16 years. Our unique value proposition ("Best in the Business") is that we develop, market, sell, implement and support world class software solutions in line with industry requirements.
- Customers rely on Softlogic to not only deliver the best products, but also for the company's significant experience and value-added implementation services including data conversion, project Management, account management and training.
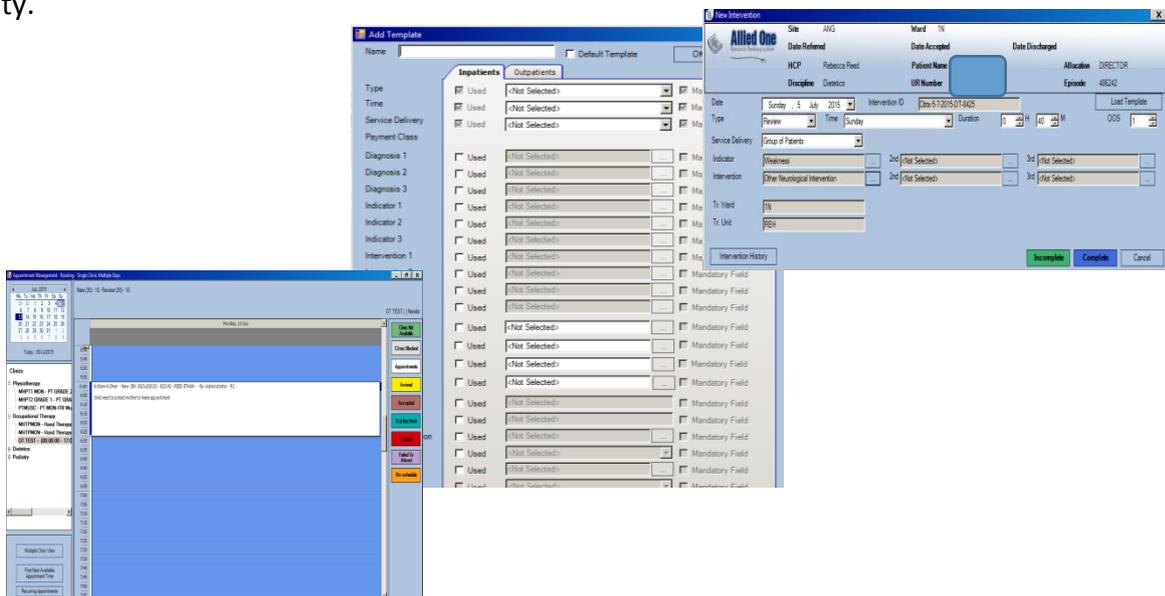

Allied One | Design & Development

The **Alliedone** package is suitable for all levels of IT confidence – Having been designed with and for health professionals, a key priority of the software's functionality, is its flexible, simple and intuitive design.

With customisable and flexible interfaces that allow work lists to be automated and drilled down, **Alliedone** is the comprehensive solution to reducing staff data entry time and enhancing data integrity.

Alliedone is easily scalable, with scope to adapt from individual service use through to integrated implementation across large scale healthcare networks.

Alliedone is currently being used by Allied Health Professionals and managers across Australia throughout the continuum of care to enable health activities to be conceptualised, analysed and reported in a way that is meaningful at local, organisation and external stakeholder level

- Acute Allied Health Services
- Sub-Acute Health Services
- Outpatients and Specialist Clinics
- Ambulatory Services
- Community Health Services
- Palliative Care
- Day Centre & Community Transport Services

Integration

Implementation of a new system requires expertise, experience and a little patience. **Softlogic Australia** has been providing comprehensive and highly integrated software solutions for the Healthcare sector for the past 12 years. Our unique value proposition ("Best in the Business") is that we develop, market, sell, implement and support world class software solutions in line with industry requirements.

To ensure reported activity is accurate, reproducible and standardised between and within professions and service locations, the **Alliedone** package integrated design brings together your clinical, patient and staff data.

SAVING CLINICIAN TIME AND ENHANCING DATA QUALITY is a priority! The integration capacity, of the **Alliedone** software, to client PAS and information systems, results in significantly less time being spent by clinician's manually entering or re-entering data which in turn, enhances data integrity.

Integration with multiple grouping systems on a single episode of care enables powerful reporting when combined with **Alliedone's** customisable and flexible report generation. This unique and essential feature facilitates superior service evaluation capacity for healthcare managers enabling broad to very specific drill down depending on reporting purpose and requirement.

Client IT & Softlogic integration occurs using standard OBDC / HL7 feeds to the SQL Server 2005/2008 database

Support Training and troubleshooting

Customers rely on Softlogic to not only deliver the best products, but also for the company's significant experience and value-added implementation services including data conversion, project Management, account management and training.

Training and detailed resources form part of the implementation phase as required to assist organisations to understand and implement activity recording practices required for capturing and reporting data for inclusion in national benchmarking activities.
